1 Installing and Uninstalling webMethods CloudStreams Provider

1.1 Description and Requirements

CloudStreams Connectors are distributed as Integration Server packages, called CloudStreams Provider packages.

A CloudStreams Provider package can contain one or more CloudStreams Connectors. Each CloudStreams Connector can optionally use a separate document type package, which is typically generated when you load a CloudStreams Provider package for the first time.

For a list of the operating systems and webMethods products supported by the CloudStreams Provider, see the *Software AG System Requirements* document available in the **webMethods** section of the [Software AG Documentation](#) web page.

CloudStreams Provider has no hardware requirements beyond those of its host Integration Server and webMethods CloudStreams.

1.2 Installing webMethods CloudStreams Provider

To install webMethods CloudStreams Provider

1. Download the desired webMethods CloudStreams Provider from the [Software AG TECHcommunity](#) site and save the package at:

For Windows:

`<IntegrationServer_directory>\instances\<instance_name>\replicate\inbound directory.`

For Unix:

`<IntegrationServer_directory>/instances/<instance_name>/replicate/inbound directory.`

Note: Ensure that you have installed the latest fixes available for CloudStreams Server and Software AG Designer.

2. Start the host **Integration Server** on which the webMethods CloudStreams Provider is to be installed (if it is not already running).
3. Uninstall any previous version of the webMethods CloudStreams Provider before proceeding to the next step, as described in [Uninstalling webMethods CloudStreams Provider](#).
4. Navigate to **Packages > Management** in the Integration Server Administrator and install the package *Wm<provider name>.zip* using the **Install Inbound Releases** option.
5. Shutdown and Restart the **Integration Server**. See the *webMethods Integration Server Administrator's Guide* for information.

Note: When a new connector version is released, in the provider package, the new connector version is enabled, and all older connector versions are disabled. If you still want to work with an older connector version, you can manually enable the older connector version, if available, in the package.

If you want to manually enable a cloud connector, from **Integration Server Administrator**, go to

Solutions > CloudStreams > Providers, select the provider and on the **Connector List** screen, for the connector you want to enable, click on **No** in the **Enabled** column.

1.3 Uninstalling webMethods CloudStreams Provider

To uninstall webMethods CloudStreams Provider

1. Make a backup of the webMethods CloudStreams Provider package *Wm<provider name>*.
2. Start the host **Integration Server** if it is not already running.
3. Navigate to the **CloudStreams > Providers > *provider name* > Connectors** section using **Integration Server Administrator** and disable all relevant connectors residing in the Provider package. After all the relevant connectors are disabled, delete the disabled connectors.
4. Delete the *Wm<provider name>* package using **Integration Server Administrator** or Software AG Designer.

ABOUT SOFTWARE AG

Software AG offers the world's first Digital Business Platform. Recognized as a leader by the industry's top analyst firms, Software AG helps you combine existing systems on premises and in the cloud into a single platform to optimize your business and delight your customers. With Software AG, you can rapidly build and deploy Digital Business Applications to exploit real-time market opportunities. Get maximum value from big data, make better decisions with streaming analytics, achieve more with the Internet of Things, and respond faster to shifting regulations and threats with intelligent governance, risk and compliance. The world's top brands trust Software AG to help them rapidly innovate, differentiate and win in the digital world. Learn more at www.SoftwareAG.com.
